

## Computer Information Systems Database Design Lab

### Steps

1. Using Microsoft Access, create the database that your team has been designing.
2. The database should be named DBLabYourName and be saved on your Z drive
3. The database must include at least 4 tables 7 for full points)
4. Each table should have at least 2 fields (a unique ID and one other field.. .for example a Genre table might include GenreID and GenreText
5. You should not be duplicating fields in your tables
6. Make sure to link your tables
7. Please circle the name of the student where the DB can be found
8. Turn in this form

Names : \_\_\_\_\_

Item	1	2	3	4
Number of tables	4	5	6	7
Database named properly		DBLab only	Name Only	As instructed
Duplicated data? (ID fields do not count on this one)	5-6 fields duplicated	3-4 fields duplicated	1-2 fields duplicated	0 fields duplicated
Relationships missing	3	2	1	0

Total points: \_\_\_\_\_ of 16
